

SharePoint® 2007 Technologies: A Comprehensive Hands-On Introduction - 4 Days

Course 538 Overview

- You Will Learn How To**
- Implement team collaboration and document management with Windows SharePoint solutions
 - Create and manage SharePoint sites with SharePoint Server 2007 and WSS 3.0
 - Tailor web content using Web Parts
 - Interface Word, Excel, Outlook and InfoPath with SharePoint Server 2007 and WSS 3.0
 - Customize the appearance of your SharePoint site using SharePoint Designer 2007
 - Leverage the capabilities of content types
- Course Benefits** Microsoft SharePoint technologies provide a web-based framework for remote team collaboration and real-time document management. The ability to plan, design, deploy and utilize an effective SharePoint solution for your organization is essential to keep pace with the competition. In this course, you acquire the fundamental knowledge and critical skills to create, manage and customize SharePoint across your enterprise.
- Who Should Attend** Those managing, developing or working in a collaborative environment who want to benefit from Microsoft SharePoint technologies. Familiarity with Windows, Office and the web is assumed.
- Hands-On Training** Throughout this course, you gain extensive hands-on experience using SharePoint technologies. Exercises include:
- Developing SharePoint sites
 - Collaborating with and creating a document library
 - Customizing a page with Web Parts
 - Consolidating SharePoint group contacts and schedules with Outlook
 - Gathering business information with an InfoPath form
 - Accessing data sources with SharePoint Designer
 - Searching multiple sites with SharePoint Server 2007

SharePoint® 2007 Technologies: A Comprehensive Hands-On Introduction - 4 Days

Course 538 Outline

Overview of SharePoint Technologies Information-handling issues

- Maintaining information integrity
- Overcoming ineffective team coordination

Benefits of SharePoint

- Accessing data from a common source
- Efficient enterprise team collaboration
- Extending Windows SharePoint Services (WSS) 3.0 with SharePoint Server 2007

Creating SharePoint Sites

Defining your site

- Selecting site types using the Site Creation Wizard
- Assigning site membership

Maintaining your site

- Protecting sites with backup and restore
- Customizing and updating site settings
- Removing inactive sites

Centralizing and Managing Content

Leveraging Windows SharePoint Services

- News
- Events
- Surveys
- Lists
- Blogs
- RSS
- Wizards
- Attachments
- Wikis
- Mobile Site

Storing documents

- Libraries: document, form, image
- Supporting various document types

Filtering library and list output

- Offering alternative views
- Generating user-defined fields

Targeting Content with Web Parts

Customizing a page

- Arranging Web Parts with zones
- Selecting components from the gallery
- Setting custom properties
- Connecting related Web Parts

Installing a Web Part

- Benefiting from third-party providers
- Choosing deployment strategies
